

dura-mesh.
BECAUSE 15 years
of coverage is
a beautiful thing.

We cover it better.

**PRESENTING DURA-MESH:
THE INDUSTRY'S ONLY
15-YEAR COVER**

All eyes are on Dura-Mesh, the industry's first and only mesh pool cover engineered to provide the ultimate in safety and protection from the elements for a full 15 years – guaranteed. Backed by CAD-based custom fabrication and outstanding dealer support, it's the best reason yet to cover your customers' pools with Merlin.

Dura-Mesh: The Long and Short of It

- Grade A polypropylene mesh is 33-60% stronger than typical mesh covers¹
- Higher abrasion resistance provides longer lasting, better looking coverage
- Denser weave keeps out silt and sediment
- Higher shading reduces algae growth

¹ Tensile strength (warp and fill). Based on independent study conducted by GeoSyntec Consultants, March 2001.

Exclusively from Merlin Industries... Dura-Mesh

Introducing the next generation of mesh safety covers. No other standard mesh safety cover can compare! Look at the independent test results...

Dura-Mesh Means Durability.

Increased filament sizes and increased number of filaments used means your Dura-Mesh cover is designed to out-perform any other standard mesh cover on the market.

- 14% Thicker
- 20% Increase in Tensile Strength in length
- 60% Increase in Tensile Strength in width
- 40% Stronger Burst Strength

Dura-Mesh keeps your pool cleaner.

By tightening the weave of the filaments and increasing the filament size itself, Dura-Mesh allows less sand and debris to fall through the cover, while still allowing for rain and melting snow to pass through. This also lets less sunlight pass through the cover, reducing the chance for algae to grow.

Dura-Mesh means a cleaner pool in the spring.

- Significantly Better Filtration of Debris
- Decreased Air Flow
- Decreased Water Flow
- 92% Shading vs. 84% to 87% for other standard mesh covers. Less sunlight = less algae.

Dura-Mesh is built to last.

By using thicker filaments in a denser weave, Dura-Mesh is designed to perform better under harsh conditions. Rough coping and high wind can destroy an ordinary standard mesh cover. Dura-Mesh is made with better abrasion resistance, to last longer.

- 20% Higher Strength after abrasion test in length
- 25% Higher Strength after abrasion test in width
- 35% Increase in Tear Strength in length
- 45% Increase in Tear Strength in width

The above data is based on typical numbers provided by manufacturers and does not necessarily represent minimum or maximum values.

We cover it better.
