## CHANNEL-LOK II BUTTRESS SYSTEM

The Engineering design of the Channel-Lok II buttress system has been developed to require fewer buttresses without compromising its strength and reliability. Along with our unique structural system and fewer buttresses, the Channel-Lok II buttress system will be appreciated for its good looks and ease of installation. This buttress system can be installed on a flat concrete surface. There is no excavation or digging needed on a flat compacted level surface.

The Channel-Lok II buttress system has been put through an intensive testing process to provide peace of mind for the final consumer knowing they will enjoy years of worry-free and relaxation. All pool designs meet, or exceed the pool industry standard. In addition to an extensive in-house Engineering design process, a vigorous backhoe test is performed prior to the launch of an new pool.

## ALL-WEATHER PROTECTION FOR YEARS OF FAMILY FUN

The top ledges and uprights on every above ground pool undergo a state-of-the-art protective treatment process in addition, they are coated with Texture-Kote. This combination provides incredibly long-lasting, all-weather protection with added resistance against corrosion, scratching and damaging UV rays. Our unique quadra-fold system and bolting pattern provides maximum wall joint strength.

Pool walls are corrugated for increased durability and resistance to ice and impact damage. Only our pools feature the self-supporting omega stabilizer bar developed to simplify homeowner installation. The ease of assembly has made our pools the number one choice of many professional installers.
