

HII Skimmer Vacuum Information

The [CaliMar family](#) of above ground pools uses the HII Deep Throat Series above ground pool skimmers.

These HII [Beige](#) and [Gray](#) skimmers do not use a vacuum plate for vacuuming the pool. Instead, the skimmer uses a more dedicated approach to vacuuming the pool.

There are skimmers that use a vacuum plate to vacuum the pool. These skimmers do not use a vacuum plate but instead come with a better way to vacuum. A dedicated vacuum port. This port location can be found on the inside of the pool, just below the center of the skimmer mouth opening. It is a round port.

From https://www.propools.com/Manuals/56059_2023428131910.pdf, see the section titled “Vacuuming” to learn more details on how to set up the skimmer to vacuum.

The vacuum port referenced in the instructions, looks like the image below.

This adaptor is packaged with the skimmer in the skimmer carton.
