

Quick start instructions - One-button operation

Not only is the ESPA SilenPlus pump the most energy efficient pool pump available today, it is also designed to be the easiest to use. You can operate the pump with one finger. For basic operation, all functions are pre-set at the factory. All you need to do is turn it on to Manual and select one of 3 pre-set functions.

Set to Manual mode Chose Function...... Your done!

- 1. Manual/Auto button
 This will always be set to manual
 unless you are using the optional
 Evopool controller. The top led will be
 solid red in manual mode. Flashing red
 shows a fault in the system when using
 Auto mode.
- Function/Stop button
 This button lets you toggle between stop and the 3 basic settings.

Functions

FILTRATION plus:-

<u>FILTRATION plus</u> creates not only the most energy efficiency, but also the most optimised filtration. The pump runs a pre-set program that shifts to high speed for a short time at regular intervals, then runs at lower speed for long derations to increase efficiency. This maximizes water circulation, filter efficiency, and energy savings. You will see cleaner water with a minimum of 80% electricity savings over standard single speed pumps.

BACKWASH plus:

The <u>BACKWASH plus</u> system, thanks to a specially developed cycle, increases efficiency while shortening cleaning time for sand and DE filters, drastically reducing the amount of water used for efficient cleaning. The result is a reduction of backwash time and improved filter-cleaning efficiency. This results in a minimum of 25% water savings over standard pumps.

FIXED SPEED:

The <u>FIXED SPEED</u> setting (both lights on) runs the pump at fixed full speed.

That's it! Set the pump in Manual and use the Function/Stop button to change functions.

Most often, you want to run in *FILTRATION plus*. Set it and forget it! The easiest one-button operation, and the most effective and efficient variable speed pump you can own.
